

Pets age faster than people

Age affects health. And one year in a pet's life equals many in yours. Find out how old your pet is in people years.

cat		dog				
age	0-20 lbs	age	0-20 lbs	20-50 lbs	50-90 lbs	>90 lbs
1	7	1	7	7	8	9
2	13	2	13	14	16	18

Why is your pet's annual exam so important?

Pets can't talk. In a way, test results give pets a voice. We run diagnostic tests and compare results from year to year to better understand the status of your pet's health.

Diagnostic testing uncovered problems in:

1 in 7 Adults

1 in 5 Seniors

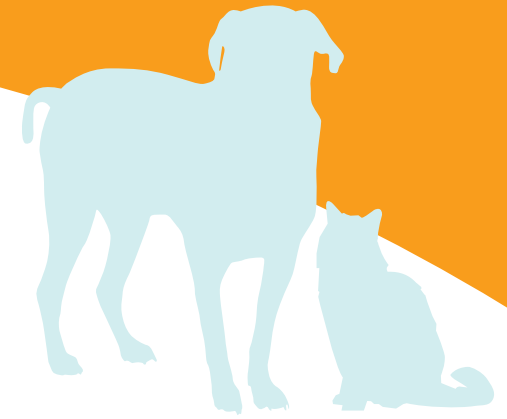

2 in 5 Geriatrics

Based on a study of 268,817 seemingly healthy cats and dogs (adult 15%, senior 21%, geriatric 42%).¹

What we look at during an exam and why

Testing helps us manage your pet's overall health

HEART AND LUNGS

Infection or disease can make it difficult for your pet's heart and lungs to deliver enough oxygen-rich blood to the body.

LIVER

Your pet's liver may have trouble managing proteins, fat, digestion and waste. These problems could be caused by disease, a blockage or even medication.

PANCREAS AND INTESTINE

Problems with these digestive organs may be due to an inflamed pancreas, diabetes or some types of cancers.

KIDNEYS

Your pet's kidneys may have trouble removing waste from the blood or making urine.

THYROID

If the thyroid glands aren't releasing the right amount of hormones, your pet's metabolism could be affected.

BLOOD

A complete blood count (CBC) tells us if your pet is fighting an infection or has some bleeding problems. A blood test can also find diseases spread by ticks.

URINE

Urine tests tell us if your pet has problems like infection or stones in the kidneys or bladder. They can also tell us about some cancers.

FECAL

Fecal tests tell us if your pet has parasites, such as worms. This is a common cause of intestinal infections in pets and may cause problems in people, too.

OTHER

Physical changes in your pet's teeth, weight, joints, skin and ears may be signs of illness.
