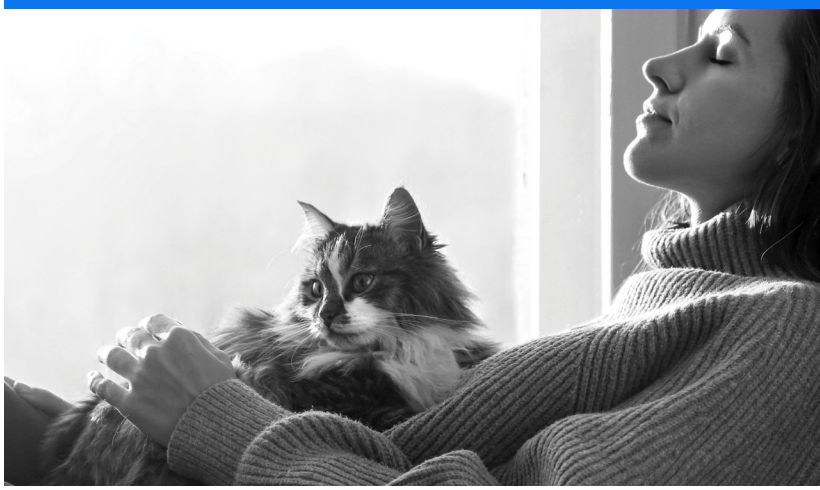
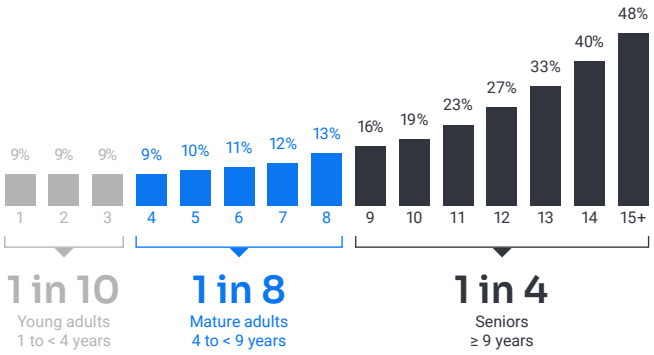
Every pet can benefit from a patient-centric approach to preventive care.

Diagnostic testing that includes a CBC, chemistry profile, and urinalysis alongside patient history and a thorough physical exam can provide a comprehensive patient assessment to help establish a pet's individual normal and uncover risks and health changes that are relevant to that cat or dog.

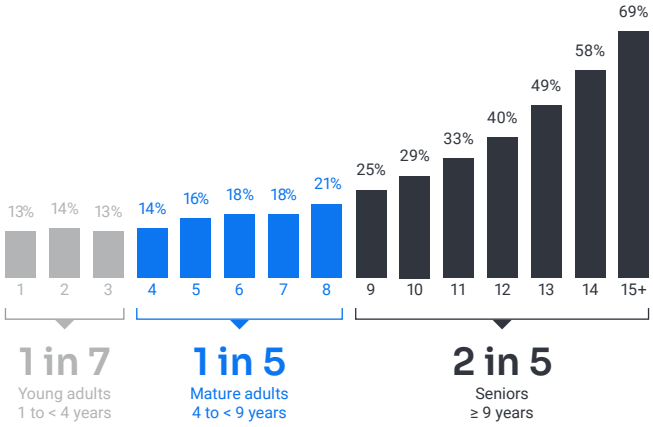


Likelihood of clinically relevant abnormalities* on preventive care lab work in dogs.

Findings on CBC and chemistry profile

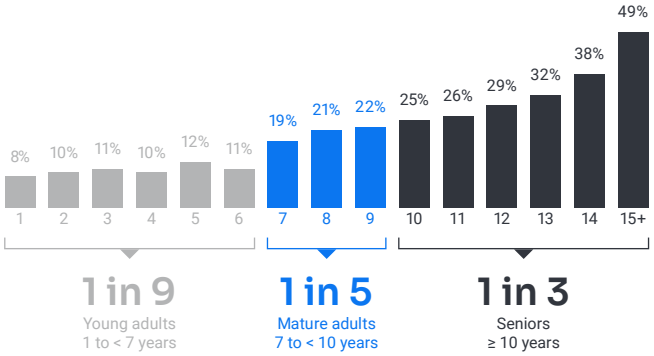


Findings on CBC, chemistry profile, and urinalysis

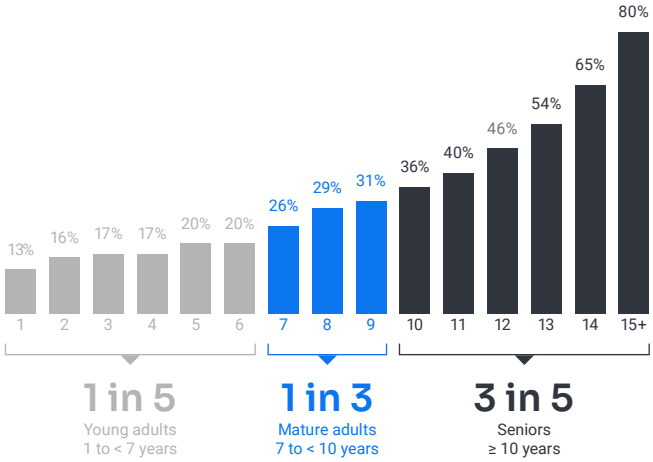


Likelihood of clinically relevant abnormalities* on preventive care lab work in cats.

Findings on CBC and chemistry profile



Findings on CBC, chemistry profile, and urinalysis

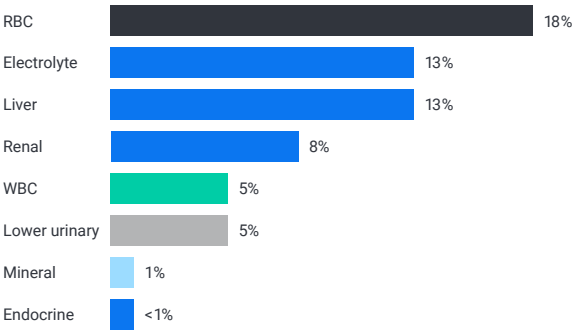


*Clinically relevant abnormalities are test results that indicate impact to organ systems or physiologic processes.

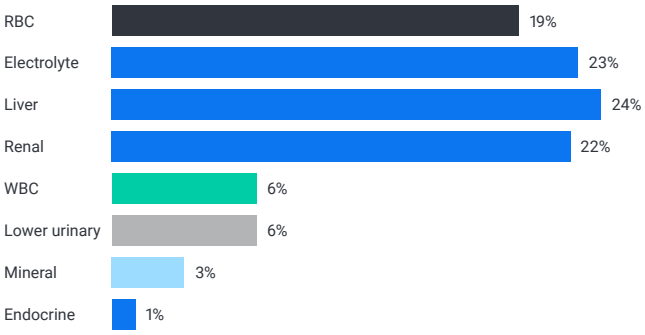
IDEXX

A comprehensive wellness profile, including a CBC, chemistry profile, and urinalysis, can confirm health status and uncover clinically relevant abnormalities* that affect different body systems.

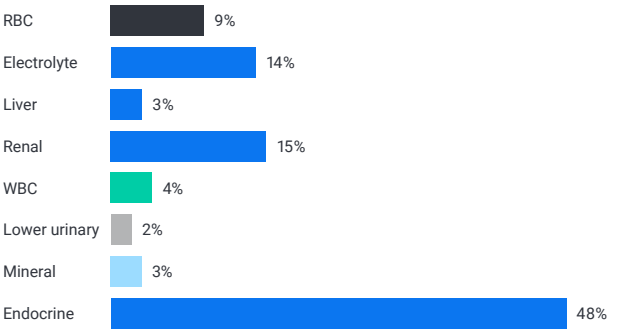
Mature adult dogs 4 to < 9 years old



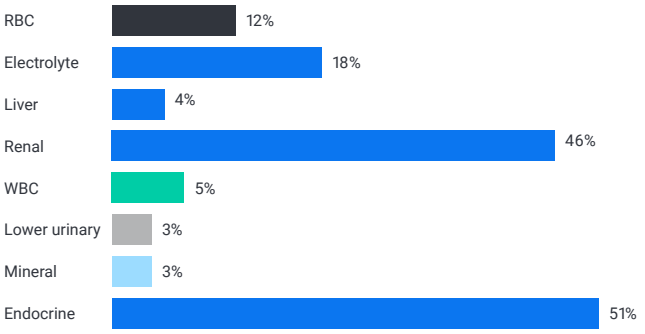
Senior dogs ≥ 9 years old



Mature adult cats 7 to < 10 years old

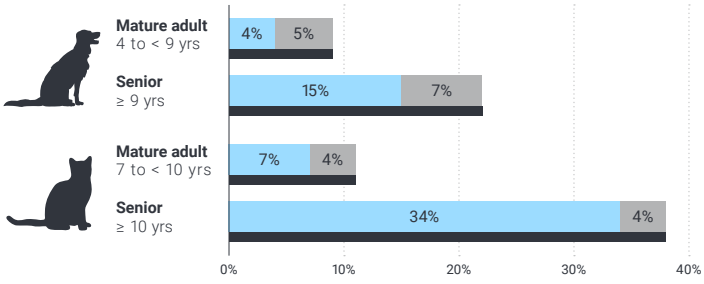


Senior cats ≥ 10 years old



CBC | Chemistry profile/CBC | Chemistry profile | Chemistry profile/urinalysis | Urinalysis

Urinalysis enables confident assessment of increased kidney biomarkers.



Represents animals with increased SDMA, creatinine, and/or BUN.
Suggests renal disease with elevated biomarker and poorly concentrated urine.
Suggests dehydration with elevated biomarker and concentrated urine specific gravity.

Using preventive care diagnostics over the lifetime of a pet can improve understanding with each individual patient.

A combination of inclusive diagnostics (CBC, chemistry profile with IDEXX SDMA testing, and urinalysis) combined with patient history and a thorough physical exam is especially helpful when it comes to protecting the long-term health and well-being of patients.
